

# make the change

Make your water safe  
before using it.

Filter water through a clean cloth. Then pour in one teaspoon of bleach for every 20-25 litres of water. Mix well and wait for half an hour before using it.

OR

Boil the water. Let it bubble for one minute to make sure it is clean and safe.

Stop dirt, germs and insects getting into your safe water by keeping it covered.  
Keep yourself and your family healthy with safe water.
